# LR2 Secure Visitor Management Solution

The LR2 Secure Visitor Management solution replaces the traditional manual Visitor's Register Book.

With the LR2 Secure Visitor Management Solution all information is electronically captured from the visitor's driver's license card and vehicle license disk, recorded and time stamped. All records are stored on the device and automatically downloaded to the Controller using Wi-Fi or USB. The Controller software displays the electronic visitor's entry log.

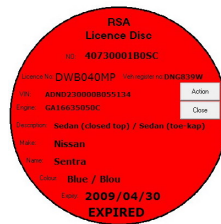

The LR2 scanner scans and verifies South African driver's licenses as well as AAMVA driver's licenses. The LR2 scans 1D and 2D barcodes and decrypts the SA driver's license card data. The scanner displays on screen the details of the driver including a photograph, for verification. In the case of vehicles, all vehicle details are scanned from the license disk and displayed on the device for verification. Device communication options include WiFi and USB. A 3 track magnetic swipe card reader is optional. The LR2 is compact and rugged to withstand the elements and rigours of use in tough environments.

On the Controller, the data is stored in XML and CSV format and can be utilised in various applications. Most clients use an Excel spread sheet to view the logs.
The LR2 Security Management Solution is a plug and play solution and comes bundled with
- 2 x LR2 scanner (one for in and one for out)
- Compatible Wi-Fi router
- 1 x Controller with preconfigured software.
Therefor there is no need for any changes to the current infrastructure on the premises.

License card and license disk displayed on Controller after scanned
