SecureVisitor

An RFID visitor management and security system

Product Overview

SecureVisitor is a management solution which replaces the traditional manual Visitor's Register Book. All information is electronically captured from the visitor's driving license card and vehicle license disk, recorded and time stamped. All records are stored on the device and automatically uploaded to the secure storage in the Cloud. Reports can be viewed and downloaded from the site www.securevisitor.co.za.

How does it work?

Secure Visitor Supports both the LR5 and LR5T scanners. The scanner displays on screen the details of the items scanned and stores it locally on the device. Up to 30,000 scans can be stored. When the scanner senses a WiFi connection with Internet access, it automatically uploads its data. It is also possible to use a WiFi to 3G/4G router for Internet access. The SecureVisitor system can be purchased from our online store.

Benefits

- Convenience: No more visitor log books to keep track of.

- Security: All data is obtained by scanning vehicle licenses and driver's licenses, providing a secure solution with no more false information

- Low Cost: Only expense is a monthly fee to access the online portal

- Data life: Data is stored on the cloud which means historical data is readily available.

LR5 Scanner

The LR5 scanner is the latest scanner which is Android based and provides additional functionality such as username and password login, GPS location and additional fields for capturing visitor details.

LR5T Scanner

The LR5T has the same functionality as the LR5 but also includes an electronic infrared temperature scanner that allows for quick and efficient temperature recording for businesses and schools in order to manage Covid 19 infections.
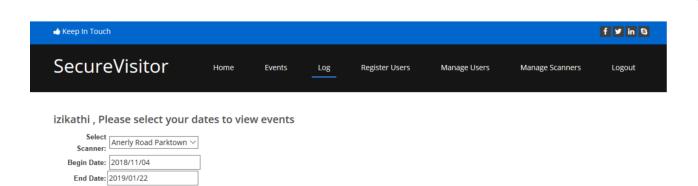

Comparison of Scanner Functionality

Functions and Data Captured	LR5	LR5T
Vehicle License Disk	All info	All info
Driving License Card	Info + Photo	Info + Photo

Site Requirements

Both scanners can store up to 30,000 transactions locally. An Internet connection is required to upload the scans to the Cloud service. A WiFi to 3G router can also be used. The data usage of the scanner can be up to 30MB per month. The battery of the scanner lasts up to 3 days depending on usage. A power point is required to charge the scanner. The warranty on scanners is 12 months.
